

AUSTIN ORPHAN

Backend Software Engineer | AI/LLM Platform Engineering
630.923.0293 | AustinGOrphan@gmail.com | AustinOrphan.com | Warrenville, IL

Backend software engineer building production fintech systems and shared AI/LLM infrastructure. Experience spans Python APIs, financial integrations, applied AI, and cross-team platform leadership.

TECHNICAL SKILLS

Languages: Python, SQL, C#, TypeScript

Backend & Data: PostgreSQL, SQL Server, SQLAlchemy, Alembic, .NET/ASP.NET

AI/LLM Platform: LiteLLM, Langfuse, Vertex AI, LLM routing, prompt management/caching, observability

Applied AI: RAG/vector retrieval, Model Context Protocol (MCP), prompt engineering, conversational interfaces, document processing

Cloud & Delivery: Kubernetes, Argo CD, AWS, Google Cloud, Git, CI/CD

PROFESSIONAL EXPERIENCE

Halo Investing Inc. | Chicago, IL

Backend Software Engineer | November 2025 - Present

- Implemented data models and APIs for trade-level billing, consolidating execution, fees, settlement, delivery, and override data.
- Built role-based analytics APIs for quote/bid performance and market win-rate benchmarks, enabling issuers to compare auctions against anonymized market data.
- Developed Pershing and Goldman Sachs trading/custody integration components spanning pricing, execution-order migration, and configurable custodian-order workflows.
- Built, supported, and contributed to 3 production AI features spanning LLM-based financial analysis, RAG/vector retrieval, MCP, conversational interfaces, and document processing.
- Drove a shared AI/LLM platform across 4+ development teams, implementing self-hosted LiteLLM and Langfuse to centralize routing, prompt management, observability, and caching while reducing redundant provider calls.
- Retrofitted another team's document-processing service to LiteLLM and advised approximately 12 engineering and product stakeholders on AI architecture, reliability, safety, and provider selection.

OSM Worldwide | Glendale Heights, IL

Software Developer | November 2023 - August 2025

- Built C#/.NET applications and carrier-routing and shipping-label workflows supporting USPS and OnTrac operations.
- Developed and optimized SQL Server schemas, queries, and stored procedures to improve application performance and data maintainability.
- Led migration of workloads toward AWS Lambda and serverless architecture, reducing infrastructure overhead and improving scalability.
- Designed and improved WinForms applications and operational workflows, saving more than 20 staff-hours per week.

Integral Ad Science | Chicago, IL

Customer Excellence Engineer | 2020 - 2023

- Automated 1,200+ recurring SQL reports, reducing manual workload by 50% and delivery time by 70%.
- Built 20+ Looker models and dashboards for 50+ stakeholders, improving reporting accessibility and saving approximately 8 staff-hours per week.
- Investigated reporting discrepancies, data-quality issues, and potential fraud using Snowflake and AWS Athena, resolving approximately 80% of escalations within one business day.

EDUCATION

Master of Science in Management | University of Illinois | Expected 2027

Bachelor of Science in Computer Science | Aurora University | December 2019
